## MODULAR POSTURAL SYSTEM that can be positioned on INDOOR and OUTDOOR BASE

### FEATURES

#### Postural SEAT easily reversible with SERVO-ASSISTED TILTING AND RECLINING SYSTEM

- **Tilting seating unit** operated by gas spring, **removable** thanks to a practical, safe, and foolproof attachment/detachment system, quickly reversible to face the parent (outdoor base), **equipped with a visual safety system**. The backrest is adjustable in height, the seat in depth and the width can be adjusted via multi-adjustable lateral supports. All the adjustments are precise and continuous.
- The upholstery of the seat is extremely breathable, comfortable, durable, easy to wash, and quick to dry, consisting of:
  - » **Non-removable supporting upholstery:** the texture with an essential design allows an **excellent breathability**, reducing sweating and bacterial growth. The fabric composition allows an **easy sanitization. It maintains performance even at high loads and is fire retardant** according to class 1 fire reaction (non-flammable combustible materials) according to Ministerial Decree June 26, 1984, and subsequent amendments.
  - » **The removable cover** is made of breathable and **highly innovative** material both internally and externally. The internal fabric is three-dimensional, lightweight, and provides high air circulation. It allows an **optimal weight distribution** and **great comfort**. The external fabric is also highly resistant to abrasion. Fireproof according to EN 1021-1:2014 and EN 1021-2:2014 standards. Washable at 40°C. Easily removable for washing with **quick drying times**.
- **Reclining backrest** with gas spring and height-adjustable precisely and continuously. The backrest has a **restraining shape** and, thanks to the resistant bearing upholstery and **aluminum bars**, provides a comfortable and breathable support.
- **Integrated headrest** in the backrest to ensure the child always has support when the seating unit is tilted and/or the backrest is reclined.
- **Includes the mod. 947 pelvic belt with variable angle.**
- **Wide and padded armrests**, adjustable in height, width, and inclination (they follow the adjustments of the pelvis lateral supports).
- Adjustable **pelvic supports** for containment in width, rotation, and depth independently.
- Height and angle-adjustable **leg rest** with physiological pivot, making the adjustment comfortable. Adjustable in depth along with the seat.
- **Adjustable single footrest with heel stops** or **adjustable separate footrests** (component mod. 957).
- **Lateral shoulder supports** mod. 967 provided as standard in the outdoor version.

#### OUTDOOR BASE (CRASH TESTED according to ISO 7176/19 and ANSI RESNA WC/19 standards) **parent-facing reversible.**

- Compact and lightweight **frame** with a new innovative design, easily maneuverable and foldable, with a tilt-adjustable handlebar. **It reduces depth space.**
- Solid, lightweight, and smooth-running **wheels** on all surfaces: 17 cm (6,7 in) front wheels with direction locks, 25 cm (9,8 in) rear wheels, with shock absorbers and independent drum and parking brakes.

#### HIGH LOW INDOOR BASE

- **Compact frame with height adjustment** - to allow approaching support and work surfaces - with gas spring adjustment while the child is seated. **The height adjustment system is internationally patented.**
- **Active tilt-in-space:** useful for positioning the child in an active position, to perform activities that stimulate straightening and activation of the posterior musculature.
- **Solid twin wheels** 7,5 cm (2,9 in), swiveling, **with rubber coating**. All equipped with parking brakes.

**Attention!**  
Read carefully the user and maintenance manual
